fast easy reliable

Draggon is the all-new way of working. If your business involves having staff going on-site to conduct surveys to measure up or to specify for products, then Draggon is a fantastic leap forward in terms of time savings, accuracy and professionalism.

We meet a lot of customers who are currently doing some or all of this process manually; they're taking printed floor plans and marking them up by hand or they have them on a computer and are marking them up electronically – either way they still have to consolidate all of this information into sales quotes, plans, manuals etc – which takes an enormous amount of time and effort.

**draggon
is
different...**

Draggon's unique interface allows you to use your smartphone or tablet to drag your product icons onto your floor plans. The system prompts you to detail quantities, product specifications, sizes etc, and allows you to take photographs and to make notes. As you go, the system is building up a marked-up floor plan of product icons, arrows and even other annotations you've made with the on-board drawing tool.

You can add as many product icons to a floorplan as you wish; there's no limit. Neither is there a limit to the number of floorplans you can build. You can copy entire floor plans, complete with all product information, to create cloned plans that you can re-name and work on separately – saving you hours of time.

get draggon get going

Draggon can do all of this off-line, so you can work in any kind of environment safe in the knowledge that the minute you're connected to the internet you can synchronise all of your work up to your Draggon account in the cloud. At this point, the system will convert the data you have entered on the Draggon app into professional-looking business documents, such as reports, quotations, estimates, covering letters and marked up floor plans.

The format of these documents can be tailored to incorporate your designs, layouts and logos and they're exportable out into the common editable formats such as Word and Excel, or into PDF if you prefer.

When you win the business, you can use Draggon in a very similar way at the installation stage; you and your engineers or fitters can record products that have been fitted by marking up the floor plan using the "drag on" interface. They can take photographs, make notes, annotate the floorplan with the drawing tool, all on their smart phone or tablet. Then, when they've finished and when they're next on-line, the whole lot can be synchronised back up to the Draggon Cloud and all of the corresponding records will be updated. Further documents can be generated at this point, such as operational manuals, invoices, reports etc.

“ We have saved literally weeks and weeks of time ”

Steve Howarth, Managing Director,
Pro Fire Systems, Cumbria.

DRAGGON IS DESIGNED TO RUN ON ALL THREE MAIN MOBILE PLATFORMS

Pro Fire Systems Use Draggon

“ Since using Draggon, we now have one comprehensive on-site process which captures everything we need. All of the data, marked-up drawings, photographs, pricing etc is all synchronised back up to the Draggon cloud where we can access each record back in the office. We can quickly select and print off the quotes, the floor plans and the other documents we need; we have literally saved weeks and weeks of time. For example, we won a contract with a major university in the north-east of England; we have conducted something in the region of 80 separate surveys - with our old system we would probably still be doing them, but with Draggon we were able to conduct the survey and turn around the quotations and related documentation within 24 to 48 hours. This has helped us massively to turn those surveys into remedial works. It has absolutely transformed the way we work!”

Steve Howarth, Managing Director, Pro Fire Systems, Cumbria.
